

2026 VENDOR SHORTLIST · FINTECH AND BANKING

Fintech and banking: performance testing shortlist

Regulated data, named financial references and staffing you can place. Abstracta publishes a bank outcome by name, PFLB publishes SOC 2 and a fixed package, RTTS states all-US W-2 delivery, Performetriks was founded by people with two decades in banking.

The gate this sector adds. Add one hard gate the table does not carry: where test data may live, and who may touch it.

The shortlist

COMPANY	PERFORMANCE TESTING IS	SECURITY ATTESTATION	DELIVERY LOCATIONS	THIRD-PARTY REVIEWS	PRICE SIGNAL
Abstracta	Performance is a core practice	Not found on their site	Montevideo HQ; offices US, Canada, UK, Chile, Colombia, Brazil	Clutch 4.7 · 23 reviews	Quote only
PFLB Delaware, since 2008	The whole company, since 2008	SOC 2 Type II	US, UK, Iceland	Clutch 5.0 · 6 reviews	Quote, and SME packages from \$2,199
Performetriks Minnetonka MN, 2017	Performance and app security	Not found on their site	US HQ in Minnetonka; IT staff also located internationally	No verified reviews found	Quote only
RTTS New York, since 1996	One line in a testing portfolio	Not found on their site	Continental US only; all engineers full-time W-2	Clutch profile, no rating	Quote only

How these five gates were applied

1. **US market access.** A US entity, a US office or explicit delivery to US customers.
2. **An active practice.** A current load or performance testing service, not a line item on a capabilities page.
3. **Inspectable proof.** A named case, a named client or a quantified outcome published on their own site.
4. **Engineering depth.** Evidence of workload modelling, telemetry and diagnosis, not just traffic generation.
5. **A usable commercial signal.** A published price, or a scope specific enough to put into an RFP.

Ask all of them the same six things

1. **A comparable case.** Similar protocols, similar architecture, a production load shape close to yours.
2. **The named team.** Lead engineer, allocation, and experience with your kind of system.
3. **Test prerequisites.** Environment, test data, access and observability they need from you before day one.
4. **The acceptance model.** Workload profile, thresholds, error budgets and pass/fail logic, in writing.
5. **The delivery boundary.** Reports, diagnosis, remediation support, and the terms for a retest.
6. **Security controls.** Data handling, compliance evidence, and every subcontractor who touches the system.

Disclosure. PFLB publishes this shortlist and appears on it. Nobody paid for placement and no affiliate arrangement exists with any company named. Every figure above was opened on the company's own site on 26 August 2026; anything we could not confirm there was left out rather than repeated. Rows are alphabetical within the shortlist, not ranked. Full method and the interactive comparison of all 11 companies: <https://pflb.us/blog/best-performance-testing-companies/>
